

## May Construction Update

**FRESNO, Calif.** – For the May Construction Alert, we wanted to give you examples of how noticeable our progress has been. To that end, we have included some “before” photos to complement the latest photos from our work sites. Where work is just beginning, we have included available renderings of what the finished products will look like. For more pictures from the work sites and continuous updates on construction visit [BuildHSR.com](https://www.buildhsr.com). For road closure information visit [Caltrans QuickMap](https://www.caltrans.ca.gov/quickmap).

### Fresno River Viaduct

Near Madera

Crews reached major milestones at the Fresno River Viaduct by pouring the bridge deck on which the train will travel. Work is now underway on the south side of State Route 145 where the abutment is being constructed. In the next few weeks, the support structure of the pictured span will be removed, leaving a free-standing, completed section of the viaduct.

April

### Tuolumne Bridge Construction

Downtown Fresno

The new Tuolumne Street Bridge is taking shape in downtown Fresno with the visible construction of the abutment on the west side of the bridge near F street. Construction crews expect to begin pouring concrete for the abutment this summer.

January

### State Route 99 Realignment

Central Fresno

A lot of progress has been made in the efforts to realign State Route 99 in Fresno. Retaining wall work is nearing completion at the auxiliary lane from McKinley Avenue to Olive Avenue. Work also continues at the Ashlan Avenue offramp, as well as the Ashlan and Parkway Drive intersection. Paving is underway in that area, along with electrical work for new traffic signals at that intersection.

February

Work has begun at the newest project site in Construction Package 1. Excavation and drilling for a 250-foot bridge at Cottonwood Creek in Madera County is now underway. Crews are tying and installing rebar for the foundations of the four-column bridge.

Equipment is now staged near the San Joaquin River, where construction crews will begin clearing land in the next few weeks in preparation for construction of the San Joaquin River Viaduct. This is a signature structure complete with arches and a “pergola” that will allow high-speed trains to travel above the Union Pacific tracks.

Seven piles have been completed at the site of the Cedar Viaduct in South Fresno. Crews are now awaiting the completion of utility relocation before moving forward. This bridge will feature arches crossing State Route 99.
